Subject: Nightly Front Store Order Files

Good Morning,

With the deployment of the SOM last Friday (Indy DC only), your computer room may have noticed that an additional front store order file is being passed. Each night, the host is pulling out all controlled Rx, PSE/EPH, and DEA listed chemical orders (items containing iodine and acetone – finger nail polish) to run them through the SOM system.

All store orders that are not run through the SOM are passed to the DCs at the normal time. The orders pulled for SOM are run through the first step of the SOM and all orders that pass the algorithms are then sent to the DCs. Rx DCs are accustomed to receiving non-control orders and then a short while later their controlled drug orders. The same basic concept is now occurring with front store orders. On-goingly, you will continue to receive a large front store order file and shortly after will receive a smaller front store order file; containing PSE/EPH, acetone, and iodine.

Please share with the appropriate individuals. Thank you.
